

Nikola Tesla Free Energy Generator - Information & Details

You may not have heard of him, but **Nikola Tesla** was a true Einstein of electricity. A world-renowned Serbian-American inventor, physicist, mechanical engineer and electrical engineer, Nikola Tesla was one of the most brilliant inventors of history and he is often affectionately referred to as the **Father of Free Electricity**.

Nikola Tesla Secret of Free Energy

Some people that know about Nikola Tesla, had not heard about the Tesla's Fuel-Less Power Generator and about the government suppression. He was a true visionary far ahead of his contemporaries in the field of scientific development. Unfortunately, he succeeded in making some powerful enemies while he was alive, so they literally banned him from history after he died. They tried to ban him from the history books, yet he is responsible for the biggest breakthroughs in electricity of the 20th century. That is why you won't find him mentioned in school textbooks, and you won't hear anyone say his name on TV. Yet Tesla is a part of our everyday lives, and there is no way they can erase his legacy.

You will find his Tesla Coil in every single TV set on this Earth, unchanged from the day when he first invented it. He pioneered wireless communication, so much so that when Marconi made the first transatlantic transmission, he was using 17 of Tesla's patents. Radars, microwave ovens, fluorescent lights, electric motors, we wouldn't have any of these without Nikola Tesla. The BBC film Masters of the Ionosphere features Nikola Tesla as the first scientist who utilized the ionosphere for the scientific purposes. The ionosphere is the ionic-charged part of the atmosphere, important for the transmission of radio waves.

Wireless Electricity

In 1934, he had made a shocking announcement about **wireless electricity**. He said *"Electric Power is Everywhere Present In Unlimited Quantities, It Can Drive The World's Machinery Without The Need Of Coal, Oil, Gas Or Any Other Fuel"*.

Hearing those words from Tesla made the Multi-Billion dollar Electric Companies GASP! Fearful of losing fortunes stolen from citizens who pay for energy every second, they stopped all funding to Tesla's device and made sure that he does not receive support from anyone else ever!

Before Nikola Tesla, it was impossible to use even a small fraction of this almost infinite source. That is because most of this energy bounces off the Earth's ionosphere and is lost forever into space. Nikola Tesla came up with a clever but simple way to harness the **cosmic radiation** of the sun, and turn it into **free electricity**. Few people know it, but Tesla had a very big dream. He wanted to bring free electricity into every single home. But when word got out, J.P. Morgan cut all his funding, and Tesla was unable to pursue his dream. Corporate executives were afraid that one invention could obsolete their multi-billion dollar monopoly, and how much of Tesla's work remains hidden in the top secret bowels of the military is unknown.

The morning after the inventor's death, his nephew Sava Kosanovic hurried to his uncle's residence. By the time he arrived, Tesla's body had already been removed. Technical papers were missing as well as a black notebook he knew Tesla kept a notebook with several hundred pages, some of which were marked "Government!"

P. E. Foxworth, assistant director of the New York FBI office, was called in to investigate. According to Foxworth, the government was "vitaly

interested" in preserving Tesla's papers. Two days after Tesla's death, representatives of the Office of Alien Property went back to his residence and seized all his possessions. Later, Dr. John G. Trump, an electrical engineer with the National Defense Research Committee of the Office of Scientific Research and Development, was called in to analyze the Tesla papers in OAP custody. Following a three-day investigation, Dr. Trump concluded:

"His (Tesla's) thoughts and efforts during at least the past 15 years were primarily of a speculative, philosophical, and somewhat promotional character often concerned with the production and wireless transmission of power; but did not include new, sound, workable principles or methods for realizing such results."

John G. Trump also commented that Tesla failed to invent anything that can be of any practical use. How Possible Could This Be When Considering That Nikola Tesla Obtained Around 300 Patents Worldwide For His Inventions? But after years of suppression, a leaked file from the Tesla folder has made it into a few independent science labs. Now this group of scientists have published the plans to build a simple Tesla generator. The result is an small and versatile home energy generator that allow anyone to tap into an almost infinite source of free energy.

How is the Concept of Free Energy Possible?

Nikola Tesla's pictured the sun as an immense ball of electricity, positively charged with a potential of some 200 billion volts. The earth, on the other hand, is charged with negative electricity. The tremendous electrical force between these two bodies constituted, at least in part, what he called cosmic energy. It varied from night to day and from season to season but it is always present.

The positive particles are stopped at the ionosphere, and between it and the negative charges in the ground, there is a large difference of voltage - something on the order of 360,000 volts. The region between the ground and the edge of space traps a great deal of energy.

But, despite the large size of the planet, it is electrically charged like a capacitor. Keeping positive and negative charges apart by using the air as an insulator. This means that the Earth is surrounded by a **vast pool of energy** and we can use it for FREE!
